Maximum Marks	2 Marks

Data Flow Diagram:

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend:

Symbol	Name	Description
Oval / Rounded shape	External Entity	The end-user who inputs socio-economic variables and receives the HDI forecast.
Rectangle with numbered header	Process(1. Web UI, 2. Flash Backend API)	1. The Render-hosted frontend that collects user inputs and displays the final score. 2. The server that routes the data from the web form to the machine learning model.
Rectangle (solid fill, no number)	Data Store	The saved .pkl model file that holds the trained logic to calculate the HDI.
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
